PRODUCT CONCEPT NOTE

Becoming

Nigeria's Personal Growth Operating System for Young People

Version 1.0 | May 2026

1. Executive Summary

The Big Picture in One Sentence:

Nigerian young people are not failing because they lack ambition. They are failing because they have no reliable system to turn that ambition into consistent, measurable daily action.

Our Answer:

Becoming is a personal growth operating system — not just another goal app. It helps young Nigerians set meaningful goals, connect them to monthly, weekly, and daily action steps, monitor progress through a visual dashboard, and stay on track through a structured accountability partner system. The end result: fewer abandoned goals, stronger habits, and — at scale — a measurably more capable Nigerian talent economy.

2. The Problem We Are Solving

2.1 What We See Every Day

Walk into any co-working space in Lagos, Abuja, or Port Harcourt. You will find talented young people whose January goals are sitting untouched in a notebook by March. Professionals who know exactly what they want but have no reliable bridge between that vision and what they do on a Tuesday morning. This is goal fragmentation—and it is epidemic among Nigerian youth.

Pain Point	What It Looks Like	The Consequence
Goal Fragmentation	Big goals exist in isolation — no link to what to do today, this week, or this month.	Goals die quietly with no visible cause.
Overwhelm & Paralysis	Too many goals, no prioritisation system, no clear progress signal.	Inaction disguised as busyness.
Zero Accountability	No one checking in, no one celebrating wins — goals become private failures.	Shame, avoidance, and repeat cycles of failure.

2.2 Why Nigeria, Why Now

Nigeria has the youngest median population in the world — over 60% of Nigerians are under 30. This generation is entering the workforce, starting businesses, and building careers during a period of deep economic pressure: inflation, currency volatility, and limited institutional support. They need personal infrastructure for growth. Nothing currently on the market is purpose-built for them.

3. The Solution — Becoming

3.1 Product Vision

> ***"To become the personal growth operating system that every ambitious young Nigerian runs their life on—the way a company runs on an ERP."***

3.2 The Core Growth Loop

Becoming is built on one central insight: goals die because they are disconnected from action. The product creates a structured, human-centered bridge between a user's big vision and their next action.

SET GOAL → BREAK IT DOWN → TAKE DAILY ACTION → TRACK PROGRESS → GET ACCOUNTABLE → REVIEW & GROW

The loop deepens with every cycle — better goals, stronger habits, compounding growth.

3.3 Core Features (MVP)

Feature	What It Does for the User	Problem It Solves
Goal Architecture Studio	Set goals across life dimensions (career, skills, health, money, and relationships) and break them into milestones, monthly targets, weekly focus areas, and daily tasks—all connected.	Goal fragmentation
Cascading Action Planner	Monthly → weekly → daily view that shows exactly what to do to move the needle. Users customize and mark complete. The system flags alignment gaps. Users can also integrate their calendars to trigger alerts for daily actions	Overwhelm & no direction
Growth Dashboard	Visual tracker showing completion %, habit streaks, focus heatmaps, and trend lines. Designed to feel rewarding and not stressful.	No progress feedback loop
Accountability Partner System (V2)	Pair with a trusted person who receives progress updates, adds check-in notes, and sends encouragement. Structured accountability, not just a WhatsApp chat.	Zero accountability

Weekly Review Ritual	Guided end-of-week reflection: What did I complete? What blocked me? What do I carry forward? Keeps users honest and growing.	Reflection deficit
Smart Nudges	Nigeria-relevant push notifications. Celebrates milestones, prompts daily priorities. Not spam messages but a motivational signal.	Consistency failure
AI Integrations	Serves as a goal-setting assistant, suggest daily actions based on set goals	

4. Who We Are Building This For

Primary User: The Ambitious Young Nigerian

Who They Are:

- Age 18–35, urban (Lagos, Abuja, PH, Ibadan, Enugu)
- Students, early-career professionals, entrepreneurs, freelancers, creatives
- Digitally native, goal-aware, but momentum-poor
- Often juggling multiple income streams or career paths

What They Say:

"I set goals every year but by February I am back to m
"I know what I want but I do not know how to break it
"I need real accountability — not just a reminder notifi

Secondary User: The Accountability Partner

They do not need to be a coach. They just need to care.

- A trusted friend, sibling, mentor, or peer
- Wants to support someone they care about in a structured way
- Currently has no system — just a WhatsApp thread that fades
- Becoming gives them a dashboard, prompts, and a clear role

The accountability partner is also a growth channel for Becoming —every user they invite multiplies our reach organically.

5. Theory of Change & Market Hypothesis

Our Core Hypothesis:

If young Nigerians have access to a structured, contextualised, accountability-powered personal growth system — and they use it consistently—then their goal achievement rates, skill development, and personal productivity will measurably improve. At scale, this raises the overall quality of Nigeria's talent output and human capital.

5.1 The Logic Chain

Input	Activity	Output	Outcome	Impact

Becoming platform + accountability partner	Daily action planning, progress tracking, weekly reviews	Higher goal completion rates among users	Faster skill development, stronger career trajectories	Improved talent quality & people economy in Nigeria

5.2 Long-Term Impact Vision

- A measurable increase in goal completion translates to faster skill acquisition in tech, creative economy, and trade sectors.
- An accountability culture built through the product normalises peer accountability norms across peer groups and workplaces.
- Over 3–5 years, becoming users show better career outcomes, higher entrepreneurial success rates, and stronger lifetime earnings.
- Compounding effect: better quality of talent, higher productivity per person, stronger economic output.

6. Market Opportunity

120M+

Nigerians aged 18–35

40M+

Active smartphone users in target segment

~5M

Early adopter addressable market (digitally active, growth-minded)

Competitive Landscape:

- Notion / Trello — task tools, not growth systems. Not built for Nigeria.
- Habitica / Streaks — habit trackers only, no goal-to-action architecture.
- BetterUp / Coach.me — expensive, Western-centric, no local context.
- WhatsApp accountability groups — unstructured, no data, no dashboard.

Becoming's Edge:

The only product combining goal architecture + cascading action planning + progress dashboards + structured human accountability — built specifically for the Nigerian youth context.

7. Business Model

Tier	What Users Get	Pricing (Monthly)
Free (Starter)	Up to 3 goals, basic weekly planner, simple progress view	~~₦~~0 — Freemium acquisition engine

Becoming Pro	Unlimited goals, full cascading planner, growth dashboard, 1 accountability partner, AI assist	~~₦~~2,500–~~₦~~3,500/month (~$2–3)
Becoming Plus	Everything in Pro + coach templates, group accountability circles, advanced analytics	~~₦~~5,000–~~₦~~7,000/month (~$4–5)
Institutional (B2B)	Bulk licences for universities, NGOs, corporate L&D—cohort tracking dashboard	Custom pricing

8. 12-Month Go-to-Market Roadmap

Phase	Timeline	Key Activities	Success Metric
1 — Discover	Now – Month 2	User interviews (50+), market survey (500+), hypothesis validation, persona development	Validated personas + pain hierarchy confirmed
2 — Build	Month 3–5	MVP development, closed beta (100 users), accountability partner feature test, weekly iteration	70%+ weekly active rate in beta
3 — Launch	Month 6–8	Public launch, campus activations, productivity influencer partnerships, PR push	1,000 registered users, 20% free-to-paid conversion
4 — Grow	Month 9–12	Referral programme, B2B pilots (universities, NGOs), NYSC partnership, feature expansion	10,000 users, ~~₦~~2M+ monthly recurring revenue

9. Key Risks & Mitigations

Risk	Likelihood	Mitigation Strategy
Low willingness to pay among target users	Medium	Robust freemium model; validate pricing thresholds early in research phase
Low retention after initial sign-up	High	Accountability partner as core retention engine; weekly review nudges; streak mechanics
Data cost barriers in non-Lagos markets	Medium	Lightweight app design; offline mode for task tracking and journaling
Global apps entering Nigerian market	Low–Medium	Deep local contextualisation, community, and institutional partnership moats

What We Need to Move Forward

Conduct deep user research (Phase 1) to validate our hypothesis, sharpen our personas, and confirm which features matter most. This concept note is the foundation — research turns it into a product.

Research begins. Assumptions die. The right product gets built.
